

Describe an interesting neighbour you have

1. Who he or she is
2. How you got to know this person
3. **and explain why you think he or she is interesting**

I want to talk something about my neighbour Ron. At first glance, he is a little bit weird because he mostly wears outdated clothes and has long beard with a strange look in his eyes.

I met him **all of a sudden** and that was interesting. One day he knocked on my door and I opened it. He came to my flat and asked whether I can give him some copper or not. I was pretty perplexed with his sudden appearance and demand for the copper. He told me that he was doing an important experiment and he needs this to carry out his test. I apologised that we do not have any copper to offer him and advised him to visit a nearby shop.

This part is easy to describe, only a short story to answer how you got to know this person

very means specific. such as the very first page

After several days he invited me to his flat for dinner to thank me helping him to get copper. I understood from that very day that he was very interesting. ★ He loves to do some strange experiments by himself at home and firmly believes that he could create something to change the world. ★ Surprisingly, he travels to hills and forests mostly to stay close to nature just for idea generation for his experiments. ★ To my shock, he has quited his full-time job now because his boss pushed him too much and he found his work is too boring. He wants to live freely and do what he believes.

why he is interesting: 1. strong belief, 2. aim of travelling, 3. do not care about decent work

Maybe he is not a success because he has no job and decent salary. People often look at him very strangely and hardly talk with him but I find him to be an interesting person. But if a person dose not do what he loves and keep a positive attitude towards his belief, he is never to be interesting.

perplexed

confused and anxious because you are unable to understand something
a perplexed expression
She looked perplexed
